

# DACIA

## Dacia, a name recognized by more and more people!!!

NEW! We are pleased to introduce, this year, to the Canadian market, the new models GTL SEDAN and 5-speed STATION WAGON - 1400 cm<sup>3</sup> engine. DACIA is synonymous of strength, comfort, safety, economy and choice.

### STRENGTH

A Dacia is built to last. Its single body construction, made of extra heavy gage steel and its factory applied anti-corrosion treatment makes it a very durable car, capable of withstanding all the rigours of our climate.

### COMFORT

A Dacia is a 4-door car at a 2-door price. So forget about your acrobatics and leave them with your former 2-door because each passenger can get in or out of a Dacia with ease.

In a Dacia, there is room for 5 adults. Thanks to its front-wheel drive, the leg space in both the front and back is much greater than in the traditional front engine, rear-drive car since the transmission tunnel is reduced to a minimum.

In fact, it's really by driving a Dacia that you can fully appreciate all of its amenities. Its orthopedically designed front bucket seats offer its passengers the comfort of a more expensive European car at a very affordable price.

The reclining front seats mean you can set the backrest at the most comfortable position either for short or long trips.

When you're sitting behind the steering wheel, all the most important features are at your fingertips: windshield wipers and washer, high beams, flashers, hazard lights and horn.

Its specially designed steering wheel gives you a perfect view of a fully equipped instrument panel that tells you all you need to know: speed, gas, oil pressure, engine temperature even brake fluid level.

Its fully-synchronised 4 or 5-speed transmission will surprise you.

Its trunk has enough space for your luggage as well as your passengers'. In the station wagon, an amazing 58-cubic foot room await your luggage once the back seat is folded down.

### SAFETY

Safety is built into all Dacia cars. Its extra thick steel combined with its reinforced doors and roof make it a very safe car. At Dacia, safety is more than skin deep. Front and rear shock absorbing bumpers come standard.

A steering column with shock absorbing capabilities reduces the risk of injuries in the event of an accident. Buckleless, continuous loop self-adjusting front seat belts can be attached with one hand. Each rear
